IS THE CASH MANAGEMENT IN YOUR BUSINESS SAFE AND EFFICIENT?

In a small and medium shops, cash management typically requires several procedures for registration, control, storage and accounting to prevent failures and losses during the process.

However these records are fragmented and are kept in different supports: cash registers, print fasteners, cashier funds, cash withdrawals among others, making the process control and audits delayed and bureaucratic.

The cash management process still requires some technical equipments for cash validation, count and guard, requiring also the presence of someone responsible to access funds if needed.

This process is still highly dependent on the suitability of persons involved and vulnerable to failure, processing errors or even fraud, tampering with records and Internal theft.

In case of failure cash losses can be considerable, with high delays until anomaly is detected and sometimes is impossible to recover the amounts lost.

In fact, managing cash with efficiency and security is a complex challenge for small and medium-sized businesses due to its limited resources, which promote the use of unsecure cash management procedures.

PERLA THE SOLUTION TO MANAGEMENT YOUR CASH THAT SIMPLIFIES YOUR BUSINESS

Perla is a full cash management solution for your business that centralizes in one device all operations involving cash validation, counting, guard and cash withdraw, ensuring high levels of security, control, audit and efficiency.

Perla also manages time attendance of your employees, offering all-in-one features in a small compact solution.

Perla is Plug and Play - It requires only a power socket and the equipment is fully operational and ready for use.
The system identifies each users through finger print, allowing the access to operations according to their own user profile.

Having the capability to exchange banknotes and to dispense funds if necessary, Perla reduces the need for large sums of cash available reducing risk exposure and increases security perception of employees.

All operations are saved and centrally recorded on a secure server, allowing query to all information any time, anywhere.
